NATHAN J. HOONG

(858) 837-1983
nhoong@sandiego.edu

PROFESSIONAL EXPERIENCE

Robotics Deployment Engineer, Contract **Amazon Robotics** **July – Nov 2020**

- Reduced Amazon Robotics site production errors by 20% and exceeded launch deadlines by 30%.
- Implemented, configured and deployed Alley Bradley software for robotic safety systems and Cognex Vision.
- Validated & verified all robotic installations met requirements in a regulated and controlled environment.
- Originated automation solution for robotic drive awakening process and reduced process time by over 50%

Hardware/Systems Lead, Capstone **Glaukos** **Sept – May 2020**

- Fabricated proof of concept for a periorbital simulator to enhance fatigue testing for product development.
- Formulated Design of Experiments (DoE) to ensure strong repeatability and efficiency of test fixture.
- Developed and automated data collection and testing processes from a load cell with an ADC, Arduino & DAQ.
- Validated stability of material and design choices with finite element analysis simulation on test fixture.

R&D Controls Engineer, Intern **Philips Respironics** **Jun – Aug 2019**

- Improved QA process time by 80% through automation of test procedures for ventilator control system.
- Facilitated multiple design reviews to solicit feedback and offer insight into design to meet specifications.
- Collaborated with test engineering team to gauge usability and compatibility of test fixture with test protocols.
- Developed code for National Instruments cDAQ system using LabVIEW graphical programming environment.

Manufacturing Engineer, Intern **Senior Aerospace Jet Products** **May – Aug 2018**

- Integrated tools into organized ERP program that manages, tracks, and allows for accountability of tools.
- Evaluated tool storage patterns and optimized manufacturing workflow by revamping tool storage.
- Exceeded project goals by completing one-year project plan in tooling management program in three-months.
- Modified legacy designs using Solidworks and PDM to aid in the production of engine mounting solutions.

EDUCATION

San Diego, CA **University of San Diego** **Sept 2016 – May 2020**

- BS/BA in Mechanical Engineering, Major GPA: 3.28 - Deans List, May 2020.
- Undergraduate Coursework: Computational Fluid Dynamics (CFD), Finite Element Analysis (FEA), Introduction to Robotics, Human Factors Engineering, Machine Shop Practices, Manufacturing Processes, Fluid Mechanics.
- Involvements: Theta Tau Professional Engineering Fraternity, American Society of Mechanical Engineers.
- Leadership: Glaukos Capstone, Hardware and Systems Lead; Theta Tau, Corresponding Secretary.

PROJECTS

- **Spinal Surgery Tool** (2021). Designed interbody and inserter tool for posterior lumbar interbody fusion (PLIF) accommodating for insert-and-rotate procedure with mechanism design for cleaning and biocompatibility.
- **Wobbler Engine** (2018). Awarded a 3rd finish with a minimum running psi of 1.3. Wrote detailed operation sheets, fabricated, and assembled all components for the wobbler engine.
- **Tension and Compression Model** (2018). Conceptualized learning aid that provides a physical representation of tension and compression in a truss system. Produced via 3D prints and implemented into Statics courses.
- **Emergency Response Vehicle** (2016). Designed vehicle on Solidworks and Raspberry Pi. C++

LANGUAGES AND SKILLS

- Applications: ANSYS Fluent | AutoCAD | Agile | Git/Github | LabVIEW | MultiSim | Solidworks & PDM
- Programming Languages: C++ | Java | MATLAB | Python
